

Talon Imaging

Talon Imaging provides a means to display additional images of both driver and vehicle to compliment the captured vehicle plate image from the Talon ANPR Software. These additional images would normally be one or more of the following:

- Wide Field of View
- Lower Side View (e.g. Car Driver Facial Image)
- Higher Side View (e.g. High sided vehicle Facial Image)

The purpose of capturing these images is to provide to the user a means to identify a vehicle of interest and/or the vehicle occupants, and to tie these images to the ANPR recognition.

Image capture is triggered when the Talon Recognition software produces a recognition result. The software has been designed so that it can be configured to obtain a number of 'pre and post' plate capture images.

This facility tied to one of the Talon Application products provides the user with a powerful tool, for monitoring, recording, and searching not only ANPR records but also images associated with those records.

In addition, the Imaging application can used in conjunction with third party databases, for example when a vehicle approaches a barrier, security personnel can check Talon imaging information against a facilities security database and compare the occupant picture against the database record.

TALON IMAGING BENEFITS

- Seamless integration with any of the above Talon application products.
- Contextual vehicle and driver occupant images for immediate or historical browsing.
- ANPR results automatically tied to all captured images.
- Multi lane ANPR and Imaging capability in one PC Chassis.

APPLICATIONS

- Defence facilities
- Business Parks
- Office or Industrial sites
- Building Sites
- Airports
- Railway Stations
- Retail Parks
- Shopping Centres
- Gated Communities
